PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 4+ years of experience building scalable internal platforms, RESTful APIs, and automation workflows across Angular, Node.js, and .NET Webforms. Delivered production-grade integrations for payment gateways (BBPS, Razorpay, Stripe), real-time data pipelines, and Slack-based automation tools. Experienced in component-driven frontend architecture and backend service design, bringing together reliability, performance, and developer experience.

EXPERIENCE

Marketwick Pvt. Ltd. | Software Engineer — Full Stack | Ghaziabad, India | Jun 2025 – Present

- Architected and deployed Node.js microservices for BBPS (Bharat Bill Payment System) integrations, handling utility bill payments across 7+ vendors including BankIT, Sankalpe, Cyrus, Kwik, Bill Avenue, RKIT, and Aeron's Pay.
- Built an automated transaction settlement engine in Node.js with a cron-based scheduler (every 15 minutes) to detect, reconcile, and auto-settle pending BBPS transactions — reducing manual intervention by 90% and preventing revenue leakage.
- Implemented real-time payment status-check layer with retry logic and idempotency guards across multi-vendor gateway responses, reducing failed transaction reports by 35%.
- Re-architected the Angular frontend from monolithic to modular feature-based structure, reducing technical debt by 40%; improved Lighthouse score from 68 → 85 via lazy loading and code splitting, boosting TTI by 20%.
- Built Slack bot integrations for internal team alerting on settlement failures, gateway timeouts, and transaction anomalies — enabling faster incident response and reducing ops overhead.

Acro Technologies | Software Engineer | Noida, India | Jan 2023 – Feb 2025

- Designed and consumed RESTful APIs across Angular frontend and .NET Webforms backend, building a unified integration layer for CRM, analytics, and reporting workflows.
- Developed 10+ scalable Angular modules using component-driven, service-based architecture — reducing inter-module coupling; engineered reusable component library (tables, modals, data grids) adopted across 5 product lines, accelerating delivery velocity by 25%.
- Conducted 50+ code reviews enforcing Angular and RxJS best practices, reducing production defects by 20%; mentored junior developers on reactive programming, async pipe patterns, and scalable state management.
- Led UI modernization with improved UX flows and WCAG 2.1 accessibility compliance, increasing user engagement by 7%.

Acro Technologies | Associate Software Engineer | Noida, India | Jan 2022 – Jan 2023

- Delivered 20+ frontend and .NET Webforms feature enhancements — new modules, responsive layouts, and performance fixes; created and tuned 20+ complex SQL queries and stored procedures, reducing database response time by 10%.
- Built client-specific reusable UI modules for enterprise CRM workflows, improving client satisfaction scores by 30%; diagnosed and resolved 50+ production bugs across UI and REST API layers.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, C#, SQL, Java, HTML5, CSS3, SCSS

Backend & APIs: Node.js, Express.js, REST APIs, Cron Jobs, Webhook Integration, .NET Webforms, ASP.NET, SQL Server

Frontend: Angular (v12–v19), RxJS, NgRx, Angular Material, Highcharts, Bootstrap, React (familiar)

Integrations: BBPS, Payment Gateways (Razorpay, Stripe, BankIT Aeps & Payout), Slack API & Bots, WebSockets

Architecture & Patterns: Microservices, Lazy Loading, Code Splitting, Component-Driven Design, MVVM, Module Federation

Tools & DevOps: Git, GitHub, Postman, JIRA, Webpack, Jasmine, Karma, Chrome DevTools, Angular CLI, CI/CD basics

KEY PROJECTS

- BBPS Multi-Vendor Payment & Auto-Settlement Engine** [Node.js, Express, node-cron, REST APIs] — Integrated 7+ BBPS vendor APIs under a unified abstraction layer; automated 15-min settlement scheduler with idempotency keys reduced pending backlog by 90%.
- Slack Automation & Internal Notification Platform** [Node.js, Slack API, Webhooks] — Real-time alerting for payment failures and gateway downtime; self-service Slack workflows for manual settlement triggers and vendor health checks.
- MT5 Real-Time Trading Dashboard** [Angular, WebSockets, Highcharts, TypeScript] — Live dashboards consuming WebSocket feeds, handling 1000+ data points/sec using OnPush change detection; reduced runtime chart errors by 20% and improved data accuracy by 15%.
- XRM CRM Platform Revamp** [Angular, .NET Webforms, SQL Server] — Modernized legacy CRM into Angular modular architecture with 30+ reusable components; reduced load time by 30%, adopted across 4 teams.

EDUCATION

B.Tech, Computer Science and Engineering — Kanpur Institute of Technology, India | 2018 – 2022
